

Apple Activities

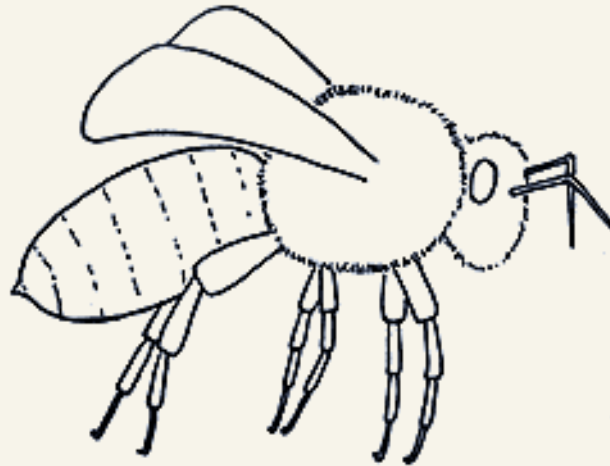

Name that Body Part

Bees are one of the many insects found in an apple orchard. Even though you may easily tell one insect from another, they all have a similar body structure.

Insects have three main body parts:

- 1) **HEAD:** The insect's eyes, mouth, brain, and antennae can be found here.
- 2) **THORAX:** The wings and legs are found on this body part.
- 3) **ABDOMEN:** This body part is important for breathing, getting rid of waste, and producing offspring.

Your task:

Using the descriptions above, point out the head, thorax and abdomen on the picture of a bee.

Now colour the bee. The head and thorax are black. The abdomen is yellow and black/brown.
